

Downrange Technologies' is a privately held Veteran Owned Small Business (VOSB) headquartered in Leesburg, VA. Specializing in risk advisory, technology and security services. We provide managed and unmanaged non-attributable secure communications infrastructure, professional services and technology solutions to federal government, commercial and private customers worldwide.

Downrange Technologies' services are tailored to meet the specific challenges in the professional, administrative, and technical program areas.

PRODUCTS & SERVICES

Products:

RICOCHET- is a web-based software toolkit designed to dynamically provision, configure and enable global secure communications on-demand. The toolkit provides users the ability to quickly and easily standup global, virtual, "ephemeral" communications infrastructure to enable secure data services, such as Anonymization and Redirection using encrypted protocols and industry best-practices. RICOCHET contains proprietary active and passive countermeasures with unique customization options requiring very little Operator technical effort.

VIRTUAL NUMBERS – A virtual phone number is a standard telephone number that is not locked down to a specific phone. A virtual number can route a voice call or text message to any phone or workflow. With virtual numbers powered by an API, complex software workflows can be built that are triggered by calls or texts.

NO MACHINE- is a proprietary computer program that provides desktop and remote access. It consists of a suite of products for desktop virtualization and application delivery for servers, and client software.

Services:

Secure Communications- is at the core of data protection; without encryption and authentication every single smartphone in your organization is a potential point of vulnerability. With Downrange Technologies Unified Threat Management solutions, you introduce essential baseline protection that is top-rated and simplifies your network infrastructure. This security and simplicity help you focus on growing your business instead of managing your network.

Systems Engineering - We are a leader in the application of systems engineering across a wide array of small to large-scale system development and acquisition programs used by government and industry. We provide world-class talent, proven management, and technical processes to manage the most complex projects—from concept through deployment.

Penetration Testing - A penetration test, or pen-test, is an attempt to evaluate the security of an IT infrastructure by safely trying to exploit vulnerabilities. These vulnerabilities may exist in operating systems, services and application flaws, improper configurations or risky end-user behavior. Such assessments are also useful in validating the efficacy of defensive mechanisms, as well as, end-user adherence to security policies.

Digital Persona Management- is the nascent class of tools that helps people keep track of and communicate what they are saying in the context in which they are saying it while participating in multiple social communities.
